ABOUT US

WinnCare Polska offers SAFE, innovative and functional equipment in the sector of CARE for the patient with mobility impairments – be it home care or hospital or other types of institutional care.

Our mission is to improve the quality and COMFORT of work of the caregivers, nurses and medical personnel providing specialized care and assistance to patients every day. Patients with mobility impairments who face not only physical but also psychological challenges related to their condition are of equal importance to us.

WinnCare Polska creates equipment facilitating care for partially immobile or immobile patients. We increase comfort of their everyday life, supporting their caregivers in their daily duties.

We believe that state-of-the-art technical solutions combined with scientific approach lead to a more satisfying working environment for the caregivers or family members of the patient with mobility impairments.

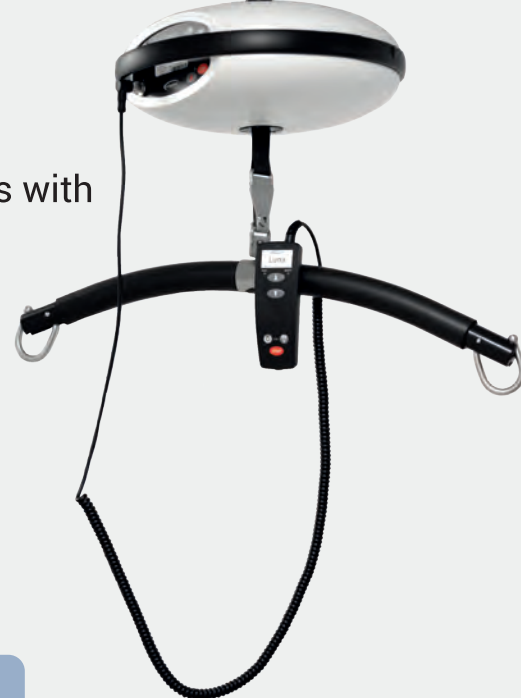

TRANSFER

Solutions enabling safe and comfortable transfer of patients with mobility impairments.

FLOOR LIFTS

Floor lifts are designed for safe and simple patient transfer. Our mobile lifts are intuitive and easy to use. They are suitable both for home care and institutional or hospital use.

LUNA CEILING HOIST

Luna ceiling hoist combined with innovative Ergolet track system. This combination results in a highly effective, safe and elegant transfer solution which meets ever-increasing expectations with regards to the safe lifting and transfer of patients. Luna ceiling hoist is versatile and easy to use in all the situations requiring lifting, sit-to-stand assistance, transfer or rehabilitation of patients. These qualities make it a perfect choice for both home and institutional care.

REHABILITATION

ERGO TRAINER

Ergo Trainer is used for the body-weight-supported exercise. It enables individualised rehabilitation adjusted to patient's needs resulting in overall motor function improvement.

SIT-TO-STAND AIDS

Sit-to-stand aids were designed as lifting aids. When used in the process of lifting and lowering, they encourage a more natural movement pattern of the patient. They become thus an ideal tool supporting the work of the physiotherapist, nurse or rehabilitation instructor.

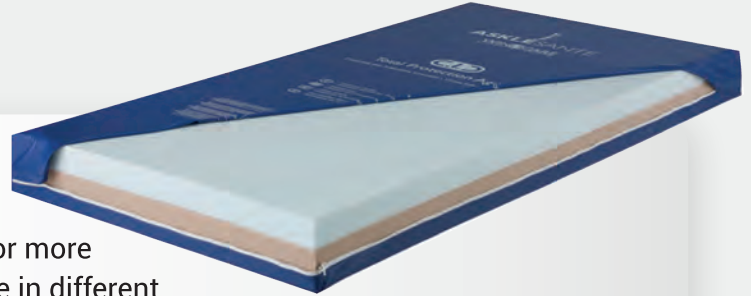

PRESSURE CARE

Wide array of equipment and accessories designed to prevent pressure ulcers and support the treatment of the already existing ones. Mattresses and cushions for patients at low through medium to high risk of pressure ulcer development.

VISCO-ELASTIC FOAM MATTRESSES

Visco-elastic foam mattresses have been designed for patients at medium to high risk of pressure ulcer development who are bedridden for more than 15 hours a day. The mattresses are available in different sizes with several types of covers.

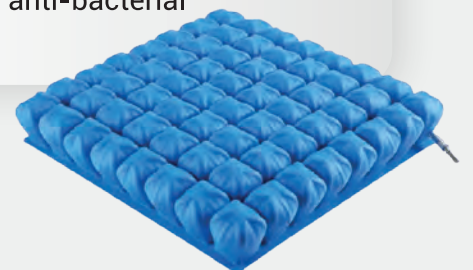

AIR MATTRESSES

Air mattresses have been designed to prevent pressure ulcers and support the treatment of the already existing ones. They were designed for patients at medium to high risk of pressure ulcer development who are bedridden for more than 15 hours a day. Air mattresses composed of tubular air cells are destined for patients at medium to high risk of pressure ulcer development who are mostly confined to bed. They support the treatment of the patient. Their covers with added silver ions possess anti-allergenic, anti-bacterial and anti-fungal properties.

CUSHIONS, STABILIZERS AND SUPPORTS

Cushions, stabilizers and supports relieve the pressure on the skin and the tissue right underneath it in the body parts vulnerable to pressure ulcer development. They permit quick and easy position change. They prevent pressure ulcers and are absolutely safe for the skin due to the anti-allergenic, anti-bacterial and anti-fungal properties.

BATHING AND TOILETING

Our products offer innovative bathing solutions focused on the ease of use and safety of the caregiver and the comfort and sense of dignity of the patient.

SHOWER TROLLEYS

Shower trolleys were designed to facilitate body hygiene of a patient confined to bed. They come in an electric or a hydraulic variant. They are used for effortless transfer of the bedridden patient from the bed to the shower. Due to variable height, they enable the caregiver to take an optimal position when washing, drying and dressing the patient in order to avoid the risk of lumbar injuries.

BATHING AND TOILET CHAIRS

Bathing and toilet chairs can be used both for bathing and toilet use. The height and the tilt of the chair can be adjusted electrically or manually, depending on the model.

BATH LIFTS AND BATHING CUSHIONS

Bath lifts and bathing cushions are a perfect choice for the patients who need assistance walking in and out of the bath. They make it possible to take a relaxing, pain-reducing bath for the elderly or the patients with mobility impairments.

MEDICAL BEDS AND FURNITURE

Our medical beds and furniture combine state-of-the-art design and the highest quality in order to meet the latest standards in the sector of care for the patients with mobility impairments. The furniture ensures optimal body position and safety of the patient.

MEDICAL BEDS

Medical beds which can be easily personalised due to the wide array of bed models, wood and textile finishes and additional accessories. Designed with the needs of the persons with mobility impairments in mind, they ensure safety and comfort of the patient and meet the EU standards.
